Soul Ticket

Adaptable for queue management

The Soul Ticket model was developed for public or private institutions to attend the clients where, somehow, a management service / waiting queues is needed. It is exclusively for indoor uses to be placed in a top of a table or balcony. It may have 1 to 8 buttons.

Apart from buttons that allow each user to choose the service we wants, the kiosk prints a ticket information to indicate the number of entrance and estimated time of call (with a service / queues integration software).

The printer driver has TCP / IP.

The information paper with indications of the functions / services that each button is intended for, has easy access and replacement and can be easily modified.

This model can be manufactured in stainless steel AISI 304 or painted steel (available in all RAL colors).

Optionally Soul Ticket can be integrated with a 7"or 10" display for use dynamic menus with the buttons.
