# Showglass Zeta

Interactivity platform with large dimensions

The Showglass model was developed for indoor use to work as a revolutionary dynamic advertising and multimedia system.

This model can be manufactured in stainless steel or painted steel (available in all RAL colors).

This kiosk was designed specifically to work as an innovative advertising system, which receives the image that is projected through a video projector. The Showglass also has an acrylic structure, with light in the front, for advertising (logo).

The dimensions of the image can vary, depending on quality and distance from which the projector is placed. However the Showglass is much more than a simple projection system of images, videos, websites, etc..

By placing an interactive foil on the glass where the image is projected, it is possible to transform the Showglass kiosk into an interactive Kiosk with large dimensions, impossible to achieve with LCD's and touchscreen monitors

With all these features the Showglass is specially suited for all types of applications where impact, size & interactivity are necessary.

The Showglass must be equipped with a computer and a video projector.

## Technical Specifications Showglass Zeta Kiosk

Dimensions: H1800 x W1350 x D450

Weight: aprox. 60 Kg.
