

# AVENUXYS®

Com barra vertical  
deslizante SLIDE2BAR

Made in Portugal

**Multimedia Kiosks and Digital Billboards are developed  
and produced in Portugal.**

The success of our company in the international market shows us that we have developed and produced excellent products and we should therefore be proud and confident in the future.

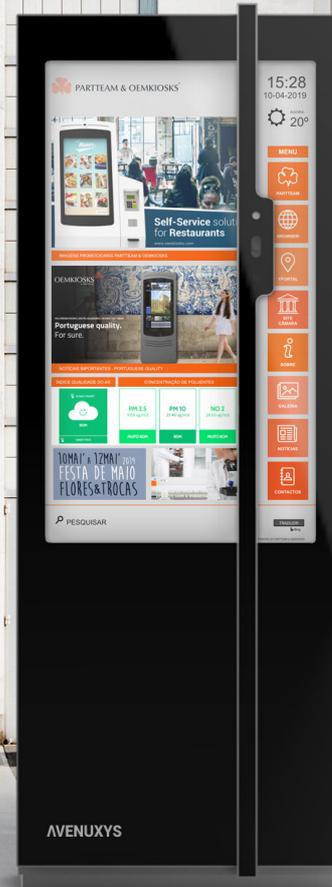

**Patented Product / Design**

# Modern and contemporary design

The AVENUXYS model was designed to be used outdoors and allows the presentation of dynamic advertising and immersive interaction.

This digital billboard was developed especially for content dissemination and dynamic interaction and can support large displays, as well as a mobile webcam.

Minimalist and sober lines give the mupi an incredibly modern and light air. This in conjunction with the compact and solid structure, transmits an image of simplicity, style and robustness.

# Immersive experience

Pure technology!

# Technology to dream about the future!

PARTTEAM & OEMKIOSKS has a unique experience in the field of interactive technologies, which allows them to be integrated into AVENUXYS effectively and professionally.

This digital billboard was developed to allow any type of touch screen, making it an interactive device.

⚠ The dimensions and specifications are given in graphical representation and may not correspond to the reality of the equipment. The dimensions show are approximate and represent the equipment for a certain size display. The final dimension may vary depending display model and other components used. The client must request technical drawing for final validation (measures and specifications).

# Once again we changed the course of History!

We present a new Interactive Digital Billboard with a sliding vertical bar - SLIDE<sup>2</sup>BAR.

The sliding bar SLIDE<sup>2</sup>BAR allows, among other features, to center the video / selfie camera on the user providing more realistic, dynamic and higher quality selfies.

They can be integrated with buttons and proximity sensor system and intercom system. LEDs can also be added to improve photographs or videos, among many other solutions that can be integrated.

This new sliding bar concept can be implemented in three ways: fixed, motorized or manual.

With sliding camera

## YPortal software with adaptive layout

The YPortal software has the ability to adapt to the vertical sliding bar SLIDE2BAR so that no content is obstructed.

The menus become available on one side of the display while the contents can be accessed on the other side of the SLIDE2BAR.

Adaptive layout

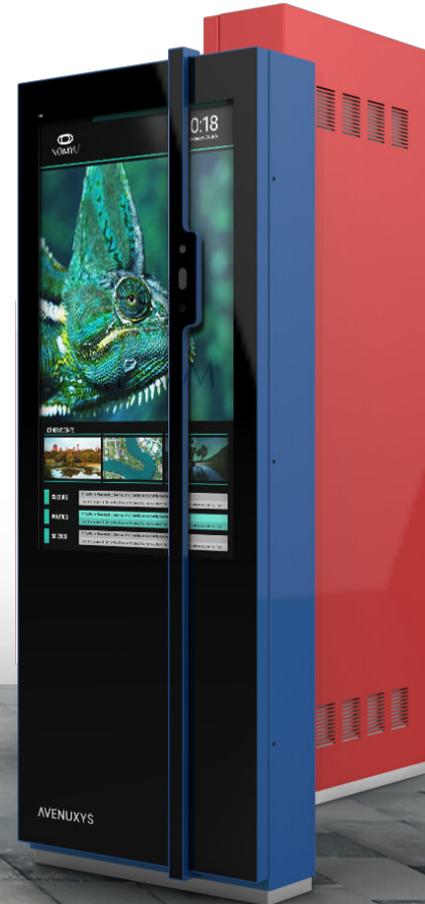

# Customize your AVENUXYS with the color you want!

Modernize your space with this extremely versatile equipment, with sober lines that can be used in different projects.

Take advantage of the vast RAL colors available to personalize your digital billboard, so that it integrates best in your surroundings.

RAL colors

## Infinite brightness, vibrant colors!

The type of displays (high brightness and contrast) used in AVENUXYS are capable of producing images with reading even under conditions of exposure to sunlight.

AVENUXYS is equipped with a high-gloss display panel for outdoor installations and with tempered safety glass with filters or AR and UV coating (optional) that ensures optimal protection against sunlight and increases the panel's MTBF.

# Ergonomic design

Innovation is the keyword for any successful product. PARTTEAM & OEMKIOSKS once again decided to challenge itself and create a different digital billboard, with an innovative structure.

This digital billboard can be complemented with a side column, providing even more complete customization, adapting to any situation and your brand identity.

The side column can function as an interactive secondary display and for passing advertising content. This complement also facilitates the interaction of people with reduced mobility with the digital billboard.

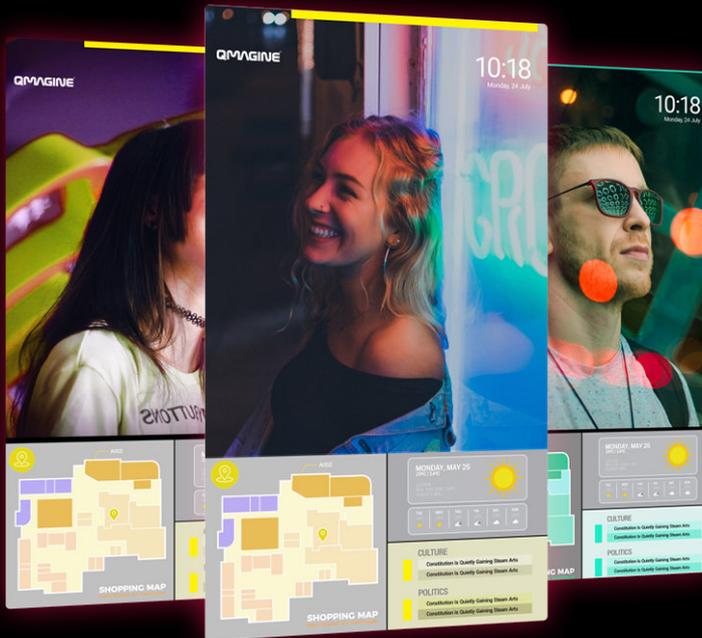

**AVENUXYS®**

**Perfect design.**

The equipment that suits you!

## Digital signage, the face of the machine!

Everything that really matters in one place.

News, maps, useful information, virtual assistance, emergencies, Internet and more. The AVENUXYS digital billboard can be managed remotely and adapted to the most varied circumstances.

# The Brain

## Our digital billboards have brains!

Our kiosks are extremely technologically advanced, mainly because they integrate an intelligent control unit (ECU), developed exclusively for our kiosks and which allows remote control and management through a web browser,

allowing the system and electronic components to be always operational.

In an emergency, protection procedures, such as turning off the display, turning off the computer, starting the air

conditioning, turning off the entire system, are automatically performed, with notifications (email or sms) to ensure that the system is the most reliable and secure possible.

# SMS and email control

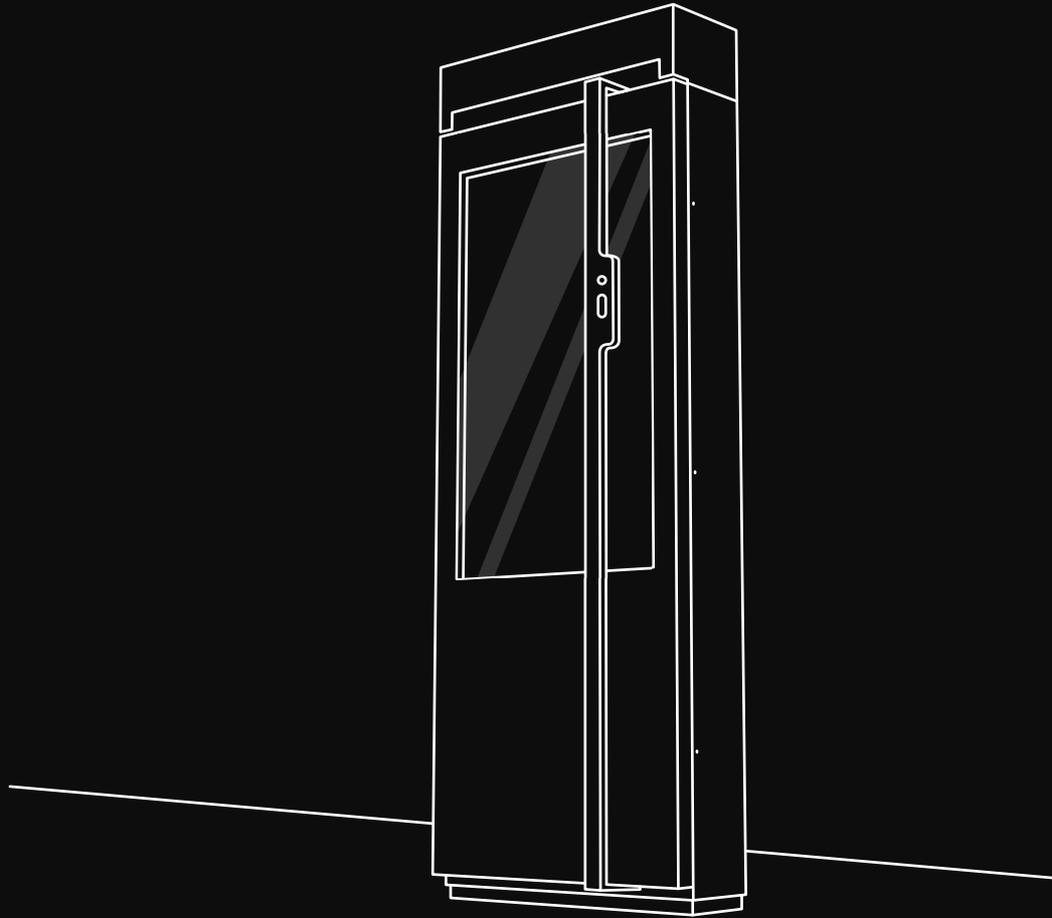

With The Brain system, it is possible to receive device status information via SMS and email.

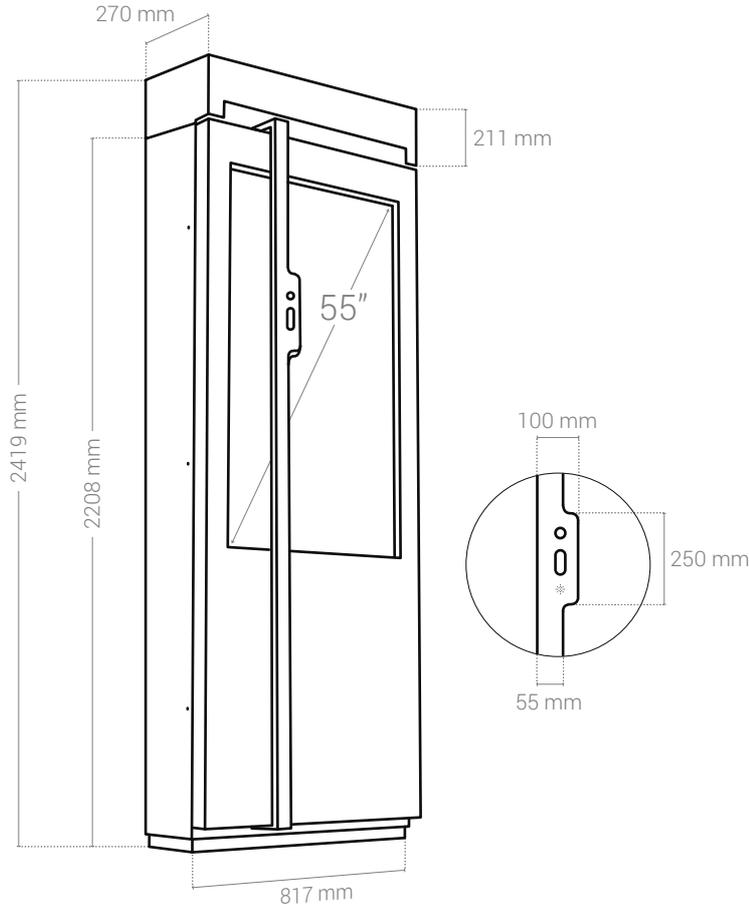

This allows authorized users to receive alerts on the smartphone and also operate on devices installed on the AVENUXYS via SMS. For example, a simple SMS with the text "Display Off" will disable the display for a specific kiosk or digital billboard.
